

Mixed-up Sentence

1. The knowledge acquired during training is embedded in the model parameters and used at inference time, rather than retrieved from the original dataset.
2. Identical inputs do not always lead to identical outputs when interacting with a language model.
3. The behavior of a language model may be influenced by provider-defined instructions that are not visible to the user.
4. Biases and behavioral patterns can be introduced or amplified not only by the training data, but also during post-training, for example through human feedback.
5. Language models generate text incrementally by selecting likely continuations given the context.
6. The use of language models does not remove the researcher's responsibility for the validity of the results.
7. Increasing model size typically comes with higher computational and infrastructure demands.
